

# SBES

## PRESS RELEASE

### Specialist Laboratory Alarm System

**With Laboratory Technicians working around the clock, SBES has developed a new lone worker alarm that can be simply placed within the top breast pocket of the Laboratory Technicians PPE / Lab Coat without hindering their activities. Giving your Technicians 'total peace of mind' should they injure themselves or become incapacitated in any way.**

The SBES LifeSaver Lone Worker Alarm Unit is capable of raising the alarm manually ('Panic Buttons') and automatically should the lone worker become incapacitated.

The Lone Worker alarm unit is permanently switched on and does not require charging (with a battery life of 18 months).

This new Lone Worker alarm unit is compatible with all the SBES Lifesaver range of systems.

**For more information, simply visit [www.sbes.co.uk](http://www.sbes.co.uk) or call us on +44 (0)1737 226622**
